Digital and Analog - Perfectly Combined

Our high-quality components guarantee a great lifespan and reliable long-term use of our Mobility products. Our digital monitor systems work perfectly 24 hours a day, even in adverse weather and environmental conditions. Numerous installations in demanding locations prove this, e.g. above 200 meters in the Alps or on the first coastline on the North and Baltic coasts.

A revision-friendly design of all systems ensures that every single component is accessible and can be serviced regularly with little effort. Stable doors in the base areas, hinged front elements and swiveling monitor suspensions inside the system allow for quick access even in the smallest of spaces. In the very rare instance of one element failing, it can be dismantled individually in a very short time and replaced with a new element immediately.

The entire frame construction is designed for maximum security. All statically relevant components made of steel or aluminum are manufactured in compliance with the requirements of DIN EN 1090 and guarantee great stability for all possible load cases. Glazing with laminated safety glass (VSG) reduces the risk of damage to people if the glass breaks. Security locks and all-round gear locks lock the housing safely and protect against vandalism and unauthorized access.

NEARFIELD-COMMUNICATION

DEFIBRILLATOR

ANTI-GRAFFITI

ANTI-FINGERPRINT

A brilliant, detailed picture with high-bright monitors
Readable in direct sunlight thanks to brightness up to 7000 nits and anti-glare glass with UV and IR protection

Intuitively operated touch elements via an optional 40-point multi-touch surface

Ceramic passepartout print on the inside of the front glass

Openable glass casement frames for revision work with profile cylinder lock

Locked base area as storage space for all electronic components, control devices and connections.

Aluminum housing in all RAL, special and anodized colors available

Reliable 24/7 operation in the temperature range from -33 ° to + 40 ° C thanks to powerful air-cooling systems and integrated heating elements

Front glass made of splinter-binding laminated safety glass (VSG) in a thickness of 9.14

Housing construction with certified shock resistance - 2xIK 10

Internal steel structures and external components are specifically designed for train speeds of up to 300 km / h

Socket door with a flush built-in security lock with a profile cylinder, optionally positioned on the narrow side

Dear Customers,

In this Mobility catalog, we present our product range for passenger information for the entire area of public transportation, including railways and airports. This catalog contains a wide range of choices between our classic, analog poster systems, which we have been successfully producing and using for more than 50 years, and our modern, centrally controllable digital information systems. Passengers are targeted directly with exciting, moving images and information that is updated in a matter of seconds. Robust devices have been developed especially for

use in the outdoor area and function without problems under difficult light and temperature conditions and can also be designed for train speeds of up to 300 km/h. Impress your passengers with skilfully arranged content and continuously updated, dynamic information, for example on car rows, schedule changes or even malfunctions in driving operations. Barrier-free control elements are also part of our product range, as are highly vandalism-proof constructions, variable design options and a very extensive range of accessory options for additional

benefits, safety and comfort.

We look forward to create your vision of individual design and function requirements combined in a product!

Yours truly, ST-Vitrinen-Team

Our Promise of Performance

As a manufacturer of showcases, totems and digital signage systems, we have been successfully operating on the market for over five decades. Individual custom-made products are part of day-to-day business. Research and development are an integral part of our product management, so that our customers always benefit from an optimal product selection and component composition. Thanks to our in-house production and cooperation with our partner TK-Surface who specializes in coating and surface technology, we are able to respond quickly to every customer request. Our experience and know-how from 50 years of company history

guarantee professional planning and production. However, we do not only offer our passenger information systems as pure "hardware". You can also count on our support for planning and commissioning. In the planning phase, we carefully record your goals and then develop a concept tailored to your requirements. This can be different for commercial customers than for a municipal customer, for instance. The assembly of free-standing totems or wall systems is part of our range of services. In coordination with your architects, planning offices or building owners, we plan the entire assembly process, take care of delivery times and dates, monitor the

external partners and accompany your project until final completion. Just talk to us about your individual project.

Of course, with our ST information systems, you always get a solution that meets our own highest demands on technology and design. Always developed and produced in-house in Bielefeld, ST-Vitrinen Trautmann is guaranteed „Made in Germany“.

Glazing	VSG 7 mm, anti-glare
Backside	Closed aluminum plate
Dimensions W×H × D	1350 × 1022 × 53 mm

KEY FACTS

- 21.5 inch monitor for dynamically updatable passenger information
- Brilliant highbright monitor, optionally with brightness control
- Additionally with poster area and labeling field, both optionally with LED backlighting
- Cost-effective solution for comprehensive, digital passenger information

MB 192 | WAITING HALL WITH INFO SYSTEM AND CLP-SHOWCASE

FRAMES INFORMATION TOTEM

The front glass of this information totem is ceramic-printed and eclosed in interchangeable glass strips. The timetable is backlit with LED lights to save energy. A barrier-free timetable is guaranteed by a notice directly behind the protective screen, as glaring is reduced for people with disabilities. For tactile detection according to TSI and PRM, a filling element made of glass and stainless steel is used as a bottom seal.

CONTROL YOUR SCREEN

Our further developed, user-friendly content management software is designed to operate our e.VITRUM outdoor and indoor series. The software enables the user to centrally control his digital content while monitoring it precisely. This allows for full control of all networked monitors at all times and coordinates the presentation of your individually compiled information or advertising content.

SOFTWARE KEY FACTS

Layout-Freedom

With the software you can freely design your screen layout according to your wishes. You are not bound to any set layouts or templates. Nevertheless, you have a large selection of predefined, freely usable screen layouts available.

Already created layouts can be saved and reused or edited at any time if necessary. The overall layout of the display area can be divided into any number of segments. All content can be displayed or played independently in free window areas.

For the individual layout segments, you can freely determine whether you want to display a website, play videos or music or if necessary display interactive elements.

There are no limits to your creativity and your ideas!

Intuitive Operation

A great advantage of the software is the simple and intuitive user interface. If you are familiar with other windows programs, you will quickly familiarize yourself with it and use the software efficiently. A quick familiarization guarantees immediate results!

A quick and easy familiarization guarantees immediate results!

Format Variety

All common media formats can be transferred to your playlists without prior conversion. Websites, flash files and PowerPoint presentations (no license required) can be displayed as well as all popular image and video file formats.

Immediately playable content, without time-consuming format conversion!

Easy Maintenance and Installation

The installation of the software on a client PC usually takes no more than 30 minutes. An easy-to-use installation routine supports you in integrating the software into your network.

Upcoming updates and software upgrades can be carried out easily and securely over the network.

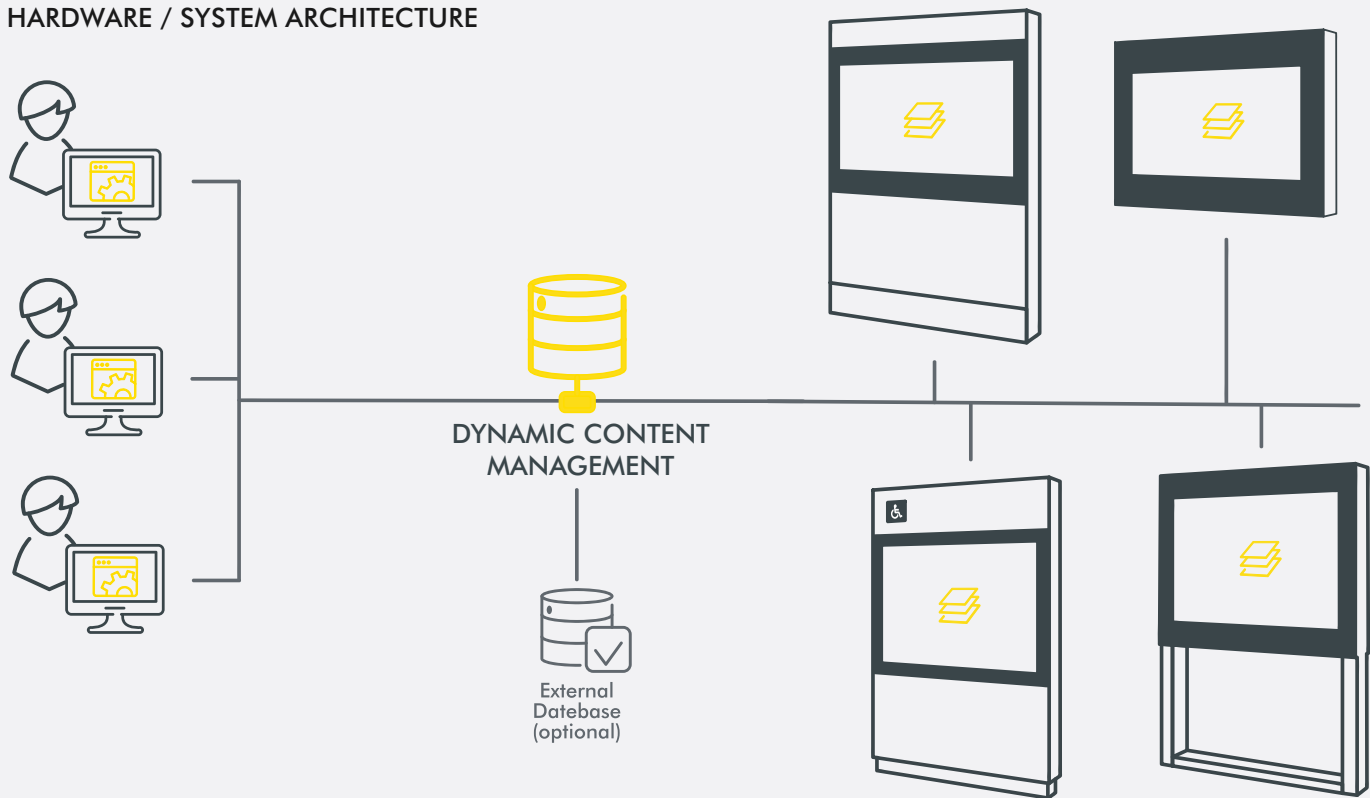

Secure system integration and easy software updates!

Protocol Function

All layout and status information is logged and saved for each point of visualization so that the data can be used, for instance, as a basis for billing or service operations.

Control and documentation are possible at any time!

HARDWARE / SYSTEM ARCHITECTURE

The **Content-Management-System** runs as software on a notebook or PC. This means that the content is managed and prepared centrally. The data structure can be expanded as required, organized in folders and sub-groups and arranged as desired.

A **Server** is responsible for data storage and exchange. It sends the current playback content to the player PCs at configurable intervals.

The **Player-PCs** or **Media-Player** are integrated into the monitor totem or the monitor housing and show the respective content on the display.

OUR PROFILE

We have been planning, developing and manufacturing showcases and clock systems since 1969. Our products are made for an extremely wide range of applications in indoor and outdoor areas. Our innovative information systems are developed with multiple partners, architects and planners in order to then be implemented with our team of metal workers, carpenters, locksmiths, electronics engineers and glaziers. It is our aim to always provide our products with the highest quality, safety and usability, as well as to give them our unique design.
